INPUTS
Asset catalogue (expert-rated)
per asset: D R E A D2 ∈ {1..10}, S ∈ {1..5}
DREAD-S: DREAD extended with a calibrated safety term
Evidence register
source quality × evidence type × link basis
per-asset confidence: Strong · Moderate · Weak · None
Verify: collect evidence, update register
ratings
labels
FRAMEWORK
1 Rescale & split
ν(x) = 1 + 4(x − 1)/9
I = (ν(D) + ν(A) + S)/3
L = (ν(R) + ν(E) + ν(D2))/3
2 Level mapping
λ : [1, 5] → {1, … , 5}
cell (λ(L), λ(I))
DREAD-S = (I + L)/2
3 Evidence weight
confidence ↦ w ∈ (0, 1]
1 / 0.75 / 0.50 / 0.25
(default; varied in evaluation)
4 EWTS discount
r̃ = 3 + w (r − 3)
band kept iff w > w*
w* = (r − 3)/(r − 3)
5 Decision
risk × evidence:
Act · Verify
Monitor · Defer + flag
OUTPUTS
SecRAM-style level pair
(L, I) levels + cell, reported in the project's own impact/likelihood tables
Evidence-adjusted score
r̃, adjusted band and w* per asset
Prioritised work list
class per asset; Verify items become evidence-collection tasks
